

Distri'Lib

Universal hands disinfection terminal with foot control

This DISTRI'LIB terminal (registered model) made of steel, with mechanical use and immediate implementation. Its foot control avoids any hand contact with the terminal and its gel distribution.

Self-stabilized and very resistant, the terminal DISTRI'LIB adapts to all formats of standard bottles. Suitable for all users, the DISTRI'LIB terminal can be fixed to the ground if necessary. A visual level check on the rear side allows you to recharge it only when necessary.
